

OM Plus – Output Management
Advanced Print Spooling
&
Delivery Engine for Optimizing Enterprise Print

OM Plus—Advanced Print Spooler

Streamlining and Enhancing Enterprise Print

Print Job Delivery / Printer Administration / Print Metrics / Report Management / Manage Consumables / Services & Support

Plus Tech – Enterprise Print Software Solutions

OM Plus is advanced, intelligent print spooling software designed to seamlessly complement enterprise software applications. Without impacting application software programs, OM Plus will ingest outgoing print jobs and provide superior print job delivery functions. OM Plus will provide end-to-end control and 'confirmed delivery' of documents to the output tray. Users may use an enterprise level monitor to see and manage all print jobs and devices. In addition, OM Plus provides a host of tools to automate the printing function. OM Plus users reduce cost from print errors, increase help desk productivity, centralize control of print environment, automate routing, confirm print delivery, gather printing data, and increase security.

"Things could not be better with OM Plus. Plus Technologies is one of the best companies that I have ever dealt with in my life!"

\$30 Billion Manufacturing and Services Company

OM Feature Summary

OM Plus operates in place of the native spooling system at the operating system level and requires no changes to the host application. Some features include:

- End-to-End Confirmation of print job status to the output bin.
- Automated notification of print failure and printer errors
- Automated fail-over to backup device.
- User interface with unified view of all servers, queues, and print jobs.
- Page level re-starts, re-direct.
- Automated load balancing.
- Intelligent, condition based routing.
- Document bursting and bundling.
- Page range printing.
- Printer device status (SNMP, PJJ).
- User/printer accounting Logs
- Color control.
- Large job re-routing.
- Security features.
- Print throughput improvement.
- Delivery of print jobs to email or fax servers.
- SAP Integrated and Certified.
- Job viewing.
- Archiving.
- Print stream format transformations.
- Tools to minimize queue administration.
- Customizable event based programs.
- Web Services Interface and API.
- Seamlessly accepts print jobs from mainframe, Apple, UNIX, Linux, Windows.
- Highly scalable solution that can support thousands of printers per server.

Plus Technologies:

Plus Technologies is an enterprise print software solutions company. We have been solving critical print problems since 1994.

Based on our OM Plus Print Management Suite, we provide our customers robust, reliable and scalable solutions to their enterprise print needs. We have thousands of customers in over 30 countries.

We work with customers to creatively resolve their specific print related problems. Our solutions help our customers resolve issues in the areas of:

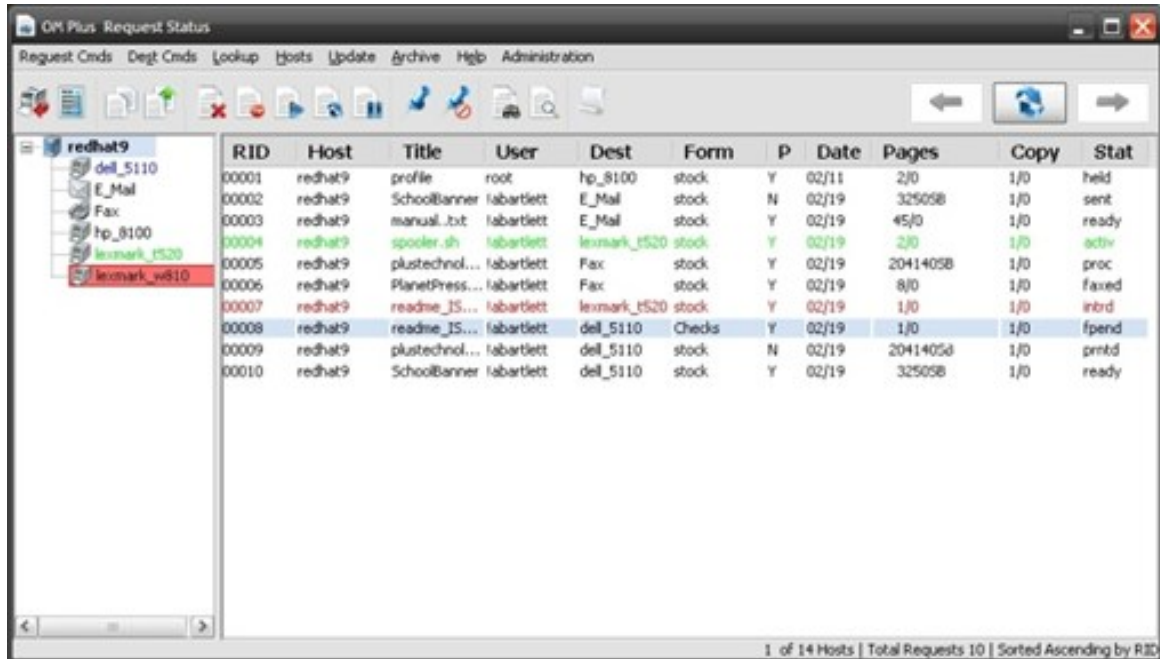

- Print Job Delivery – Spooling
- Print/Queue Administration
- Print Accounting and Metrics
- Document Transform
- Document Archiving
- Electronic Report Management
- Printer Fleet Management
- Consumables Automation

Enterprise System Dashboard

OM Plus Modules

Client Interface

Every OM Plus Windows/UNIX/Linux Server license comes with 3 thick client GUI interface licenses that are typically used by System Administrators and Help Desk personnel. This interface provides access to all of OM Plus' functionality. Additional licenses can be ordered as necessary. As an added bonus, every OM Plus UNIX/Linux Server license also has a command line interface. For wide scale access by many personnel, we recommend our Web Client Interface.

Web Client Interface

This interface provides a "zero client" deployment solution for accessing OM Plus. It is an easy way to deploy capabilities for monitoring job status, printer/queue status, viewing, printing, management tasks and more. It basically provides the same capabilities as the thick client interface without the need to install software on workstations. This interface is typically used by Help Desks, Field Support, End Users and System Administrators.

Digital Dashboard (high level view of OM Plus environment)

Provides a high level enterprise view of the health of the OM Plus environment via a browser interface. It is very helpful for large complex environments with multiple OM Plus servers or locations. At a quick glance, users can see the health of various OM Plus servers and their services. They can quickly drill down on locations, servers, jobs, queues and services. It sits on top of the Web Client interface, providing a higher level view of the environment, but seamlessly transitions into the Web Client interface for the more granular print job and queue information.

SAP R/3 Interface (see print status information directly from SAP I/F)

See print job status directly from the SAP GUI so users do not have to go to OM Plus to see the status of their print jobs. OM Plus is SAP R/3 certified for version 4.0 and later and fully meets the BC-XOM standard. OM Plus can receive R/3 reports; return messages back to R/3 and can identify R/3 end user and report id's.

Please ask us for our other modules

There are more modules available, ask one of our advisors to inform you about the possibilities, like:
Context Delivery Plus (advance document delivery actions),
Report Distributor Plus (one job into many),
Report Bundler Plus (many jobs into one),
Archive (short to medium term),
Printer-Based Job Release,
OM Stats (statistical analysis of print environment metrics)
